Saltwater and Marine Atmospheres

MBCI warrants that its panels exposed to normal atmospheric conditions, will perform according to the terms, conditions and/or limitations specific to the applicable Signature[®] 200, Signature[®] 300 or Galvalume[®] warranties issued for such panels. MBCI does not guarantee the performance of panels subject to corrosive conditions including, but not limited to, saltwater/marine environments. While a minimum safe distance from these conditions that is acceptable in all situations cannot be established, MBCI does provide general guidelines for installations near these areas.

- 1,500 feet from coastline with surf
- 1,000 feet from saltwater marshes, canals or large bays

Please be advised it is impossible to anticipate each and every condition under which the MBCI panels may be exposed to salt spray, saltwater or marine atmospheres. Therefore, the general guidelines described above may vary based on project or location specific conditions.
